

NOTES

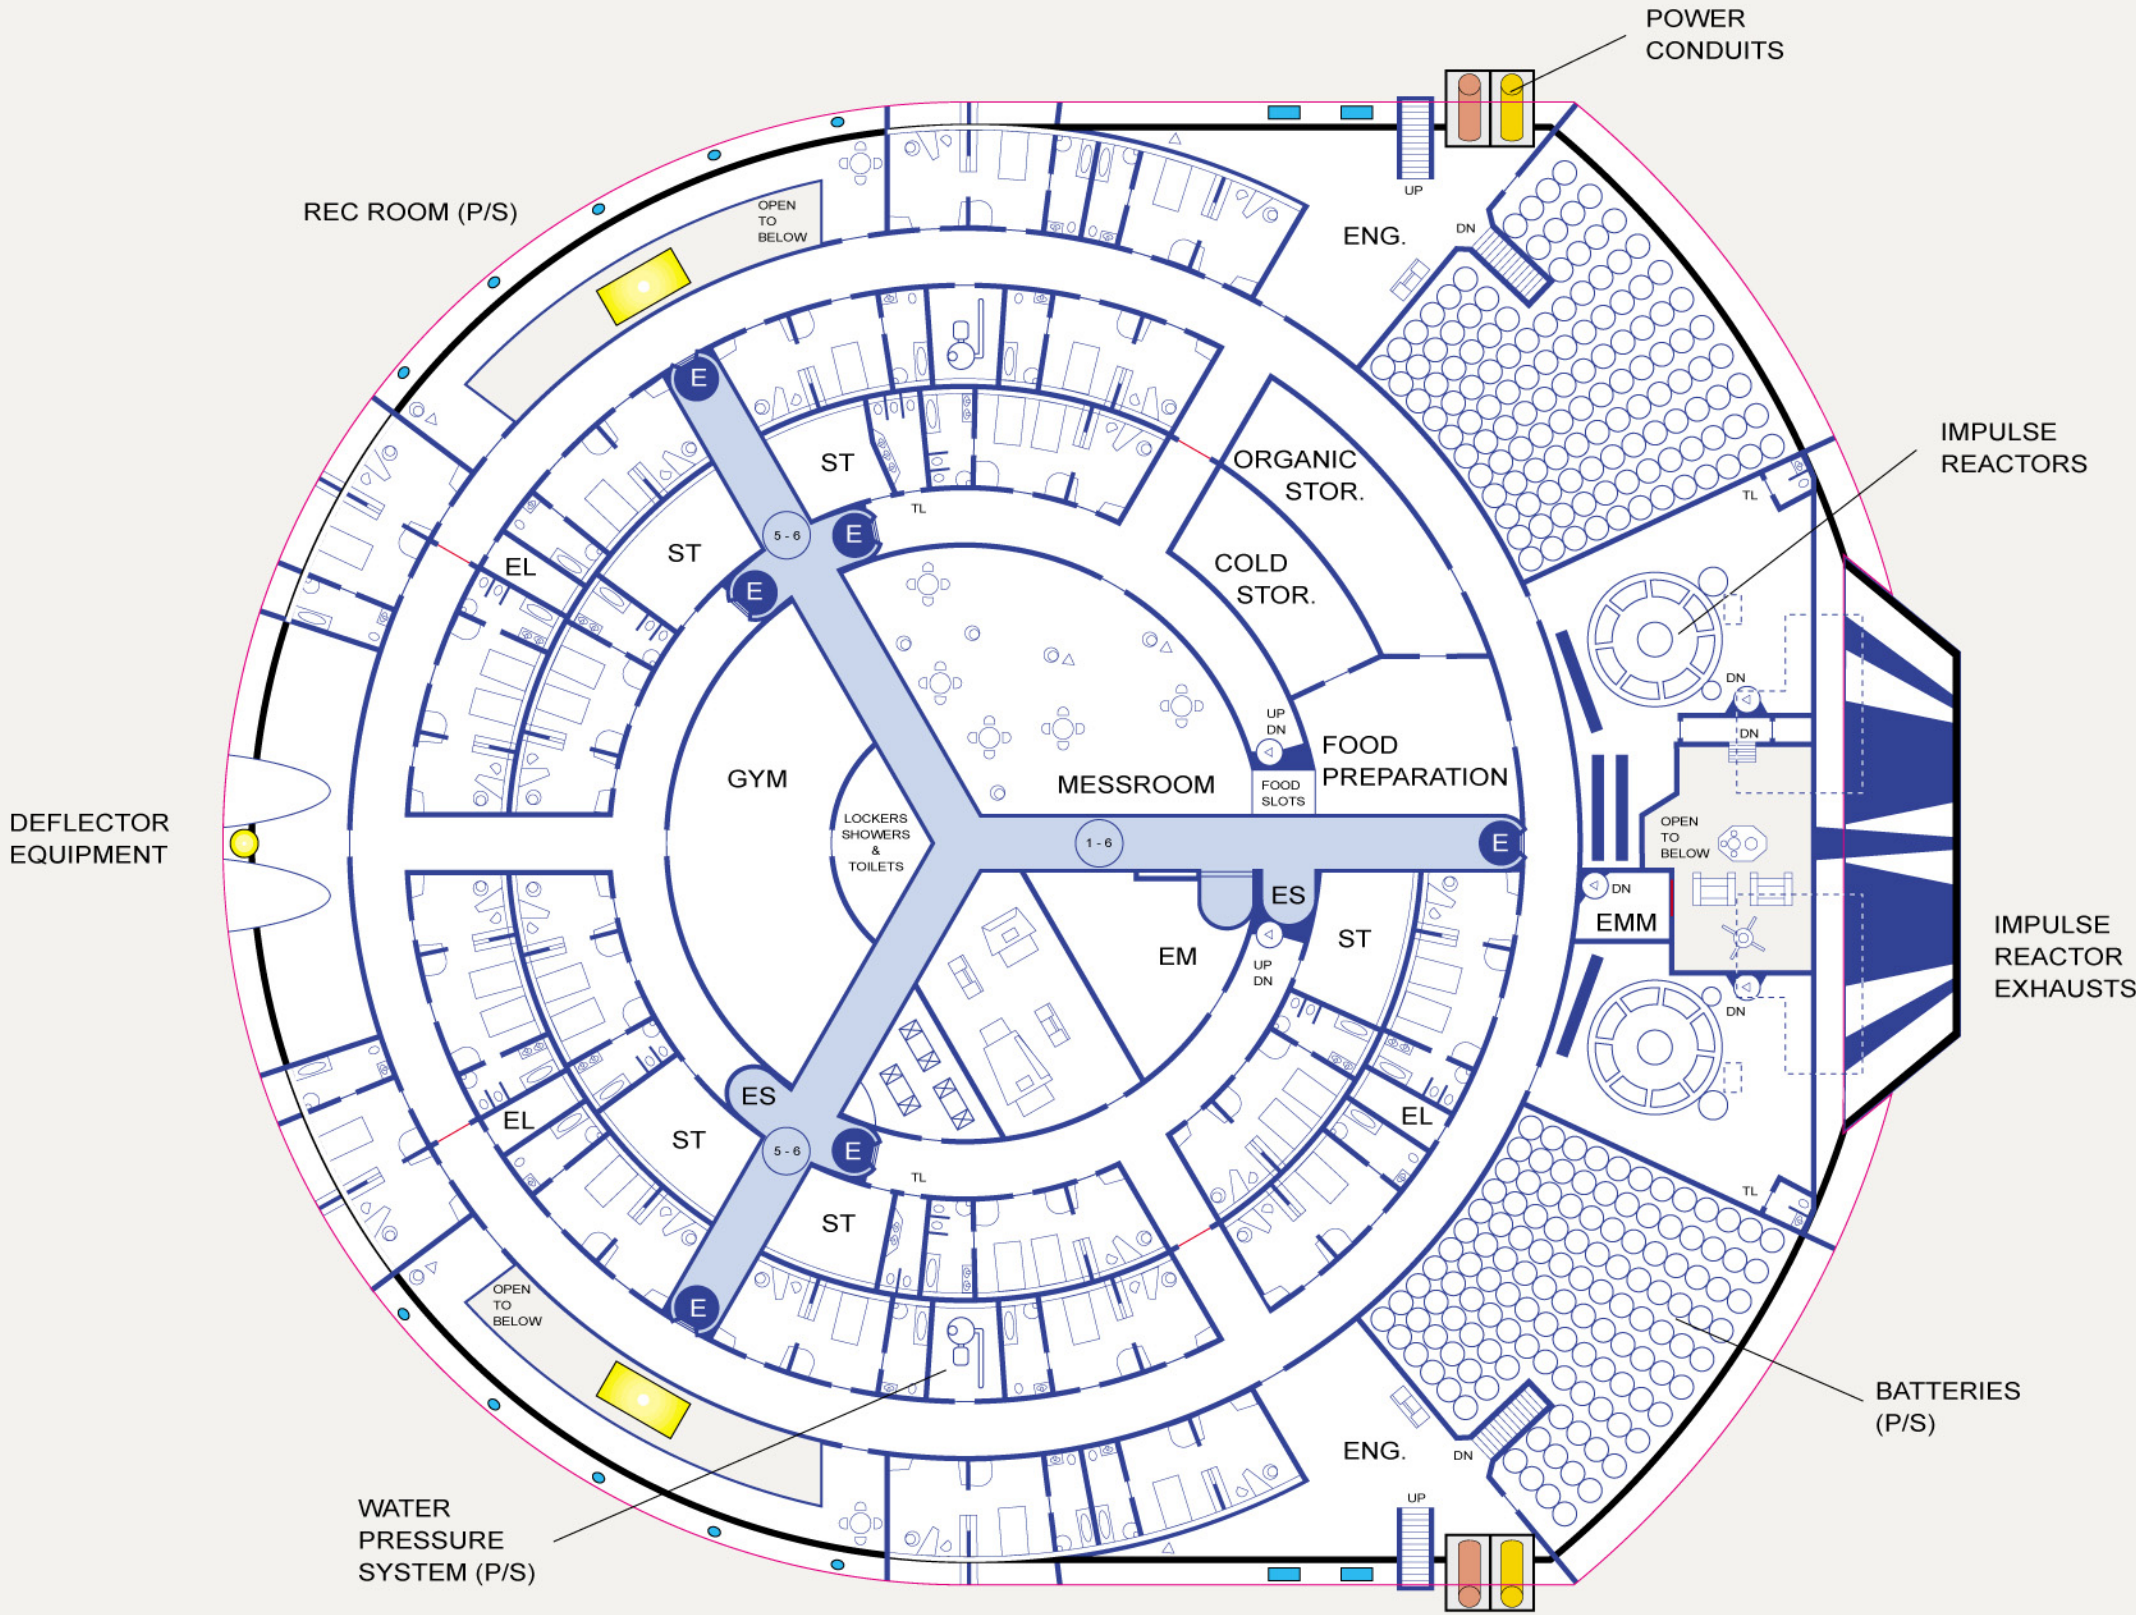

DECK 5
The layout of this deck starts with elements of Franz Joseph's design of the ENTERPRISE. I like the tri-radial symmetry of his design. However, his turbo-elevator shafts were not set at 120° so I adjusted them. There are also two turbo-elevator storage space.

Crew Quarters occupy this deck in 3 rings, but there are other rooms too.

The outer ring contains the upper level of the 2 Recreation Rooms. At the very front is the Deflector Equipment which is also spread across 2 decks. To port and starboard are stairs leading up to the

DECK 5 (continued 1)
Matter-Antimatter Reaction Chambers, Engineering monitoring stations, and Batteries. Power Conduits drop down from the Warp Engines to Deck 6.

Toward the rear of the outer ring is the Emergency Manual Monitoring Station, Engineering Computers, and the upper level of Main Engineering.
The Impulse Engines are aft of Main Engineering.

DECK 5: CREW QUARTERS / ENGINEERING

DECK 5 (continued 2)
The middle ring also contains Crew Quarters at the front. On each side is Water Pressure System equipment. At the back, on the starboard side only, is the Food Preparation area, the Organic (Food) Storage area, and the Cold (Food) Storage area.

The inner ring contains Crew Quarters and Storage Rooms.

DECK 5 (continued 3)
In the center at the front is the Gymnasium. To port are Laundry Facilities, a Reclamation and Manufacturing Center, and the Turbo-elevator Repair Center. To starboard is the Messroom.

Environmental Lockers (EL) fill the rest of the spaces on this deck.
