

## NOTES

### DECK 9

The Water Storage found here is a continuation of the Water Storage on Deck 8.

Cold storage (mostly for food) is located at the rear and is accessed via a platform-lift from the food preparation area on Deck 8.

There are four hatches or ports on the Heavy Cruiser, but their distribution is asymmetric. For the Primary Hull of the Dreadnought-Class ship, they were redesigned. Despite the redesign, the hatches are not tall enough for any crew members to fit. The Dreadnought-Class Primary Hull was used for this Light Cruiser.

These 2 hatches on Deck 9 probably have a function similar to the Umbilical Connection Panels as on the Space Shuttle (see images below). The other two hatches are on Deck 10.

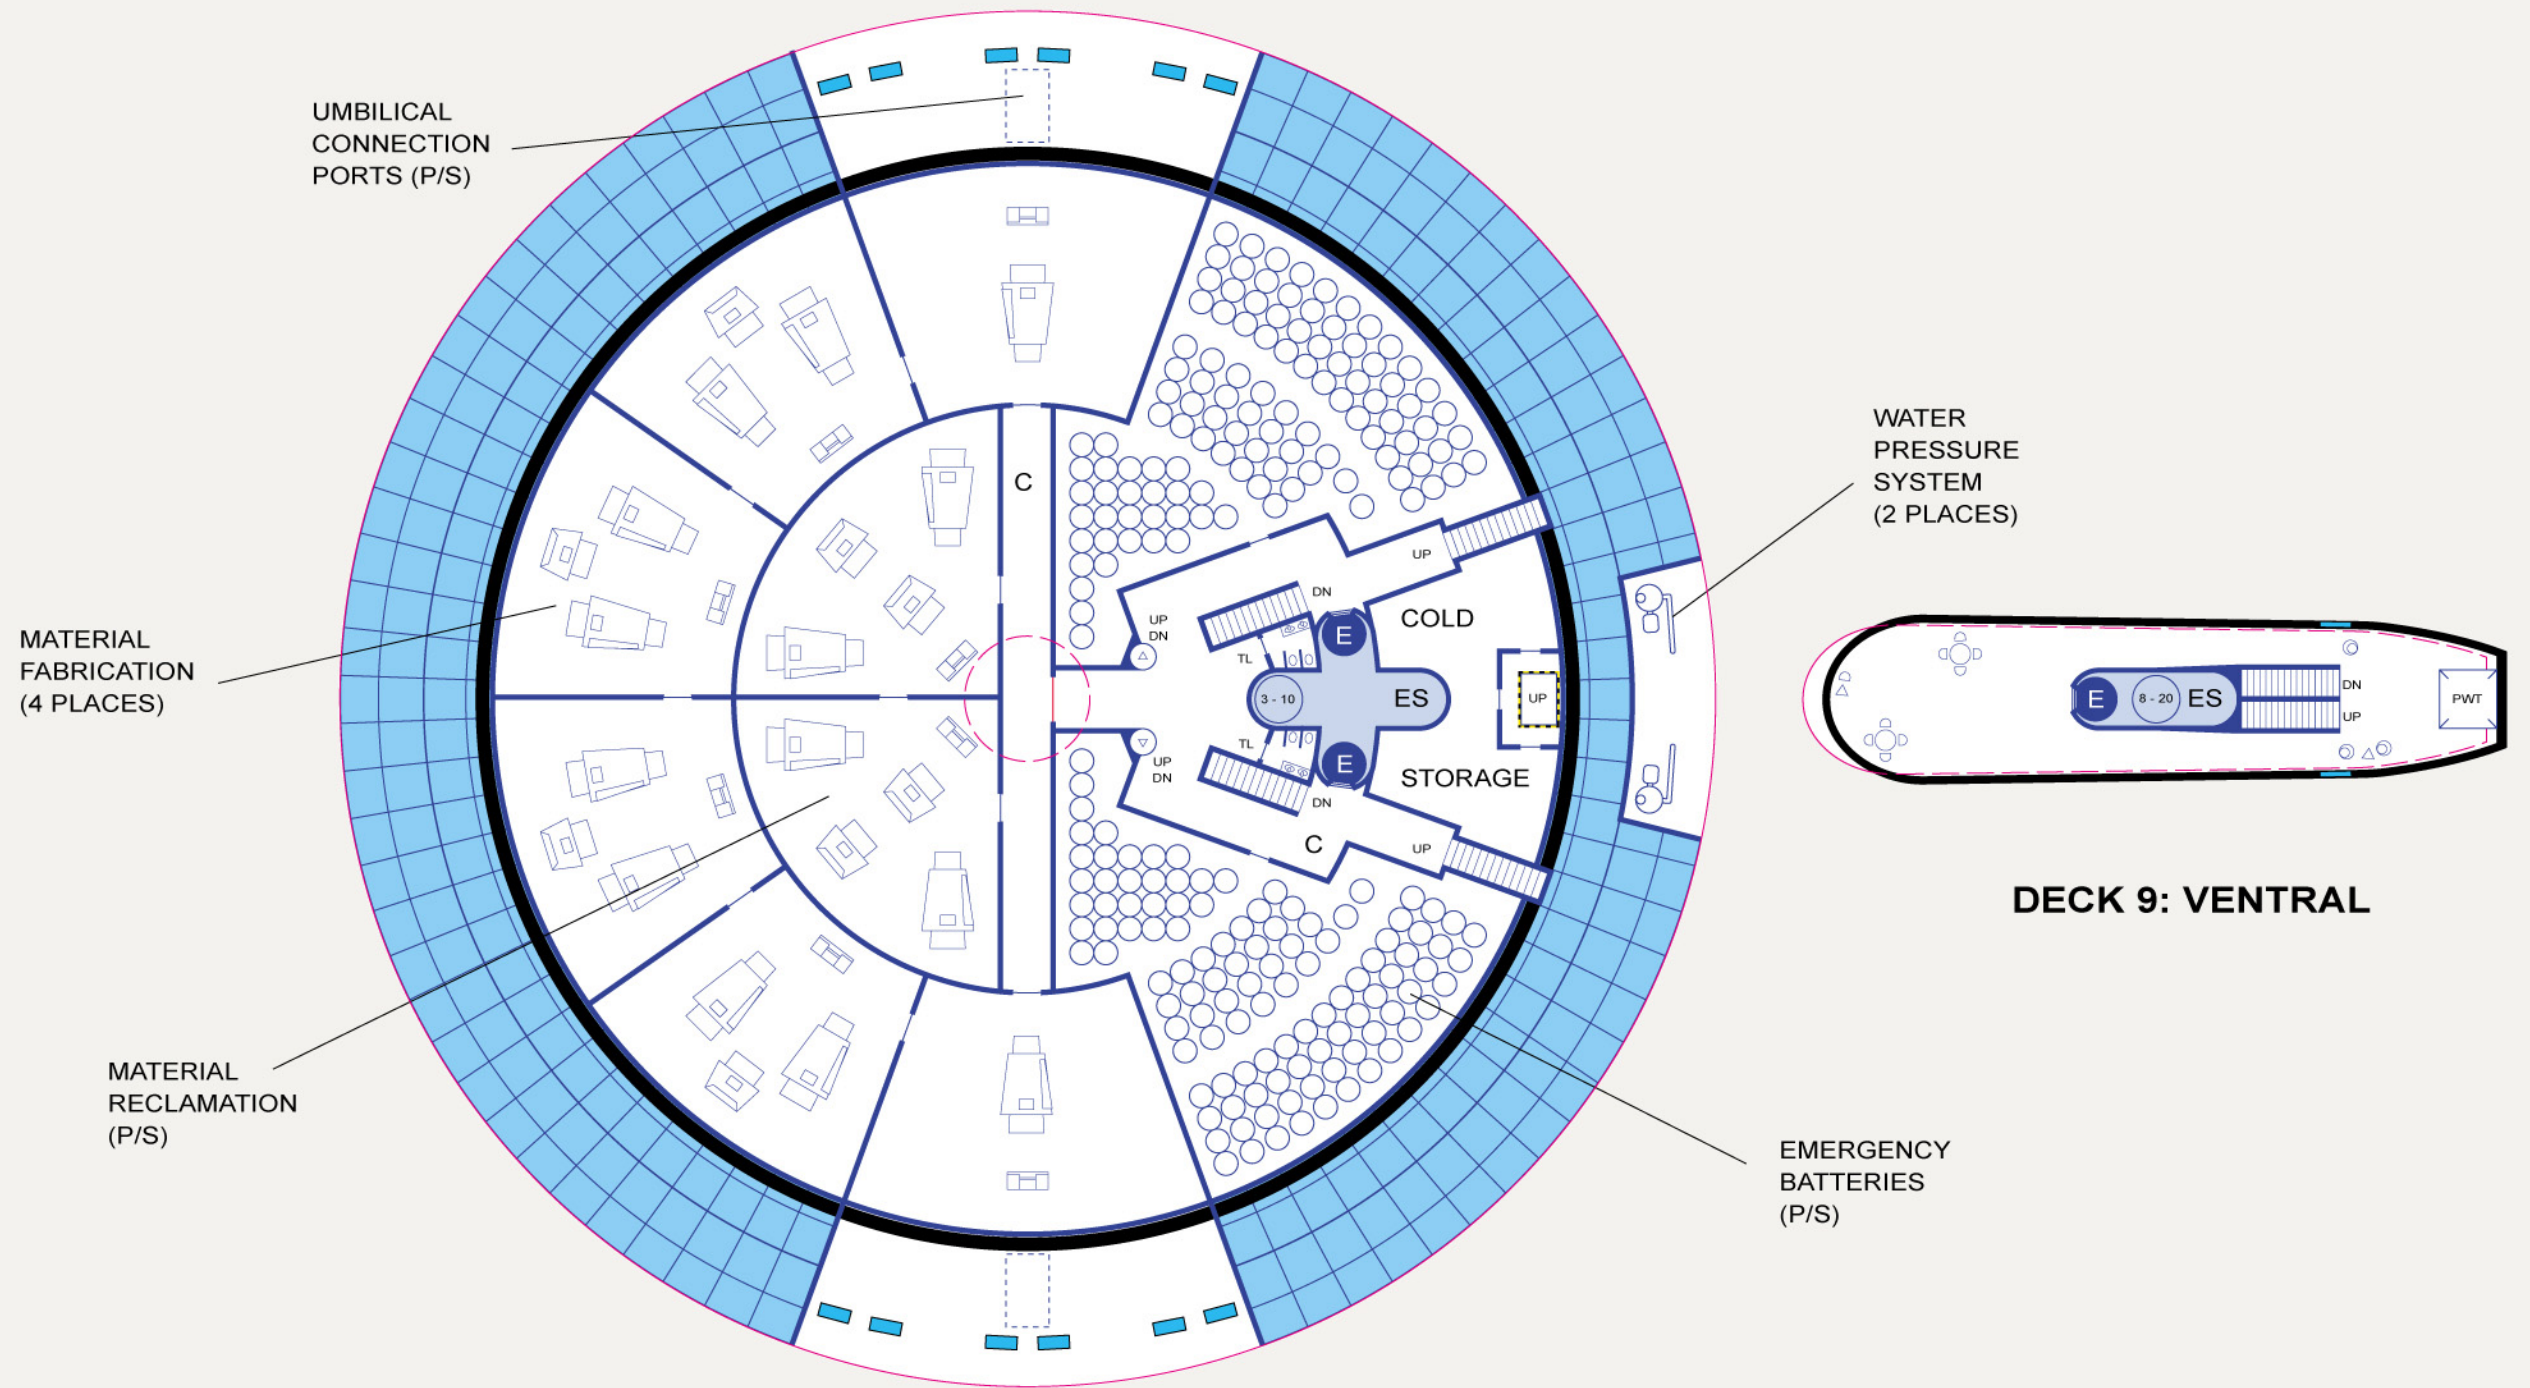

### DECK 9 (continued)

Material Reclamation and Fabrication takes up most of this deck and part of Deck 10. Material Reclamation and Fabrication is probably not a 100% efficient process. Therefore, these 2 hatches could allow for transfer of rare elements required in various manufacturing processes.

More batteries are located on this deck.

### DECK 9 VENTRAL

This is a lounge.

DECK 9: MANUFACTURING AND FABRICATING
