

DECK 1: UPPER SENSOR DOME

DECK 2: SCIENCE LABORATORIES

NOTES

DECK 1

The upper sensor dome feeds data directly to the various science laboratories on Deck 2. That data is then relayed to the various command stations on Deck 3.

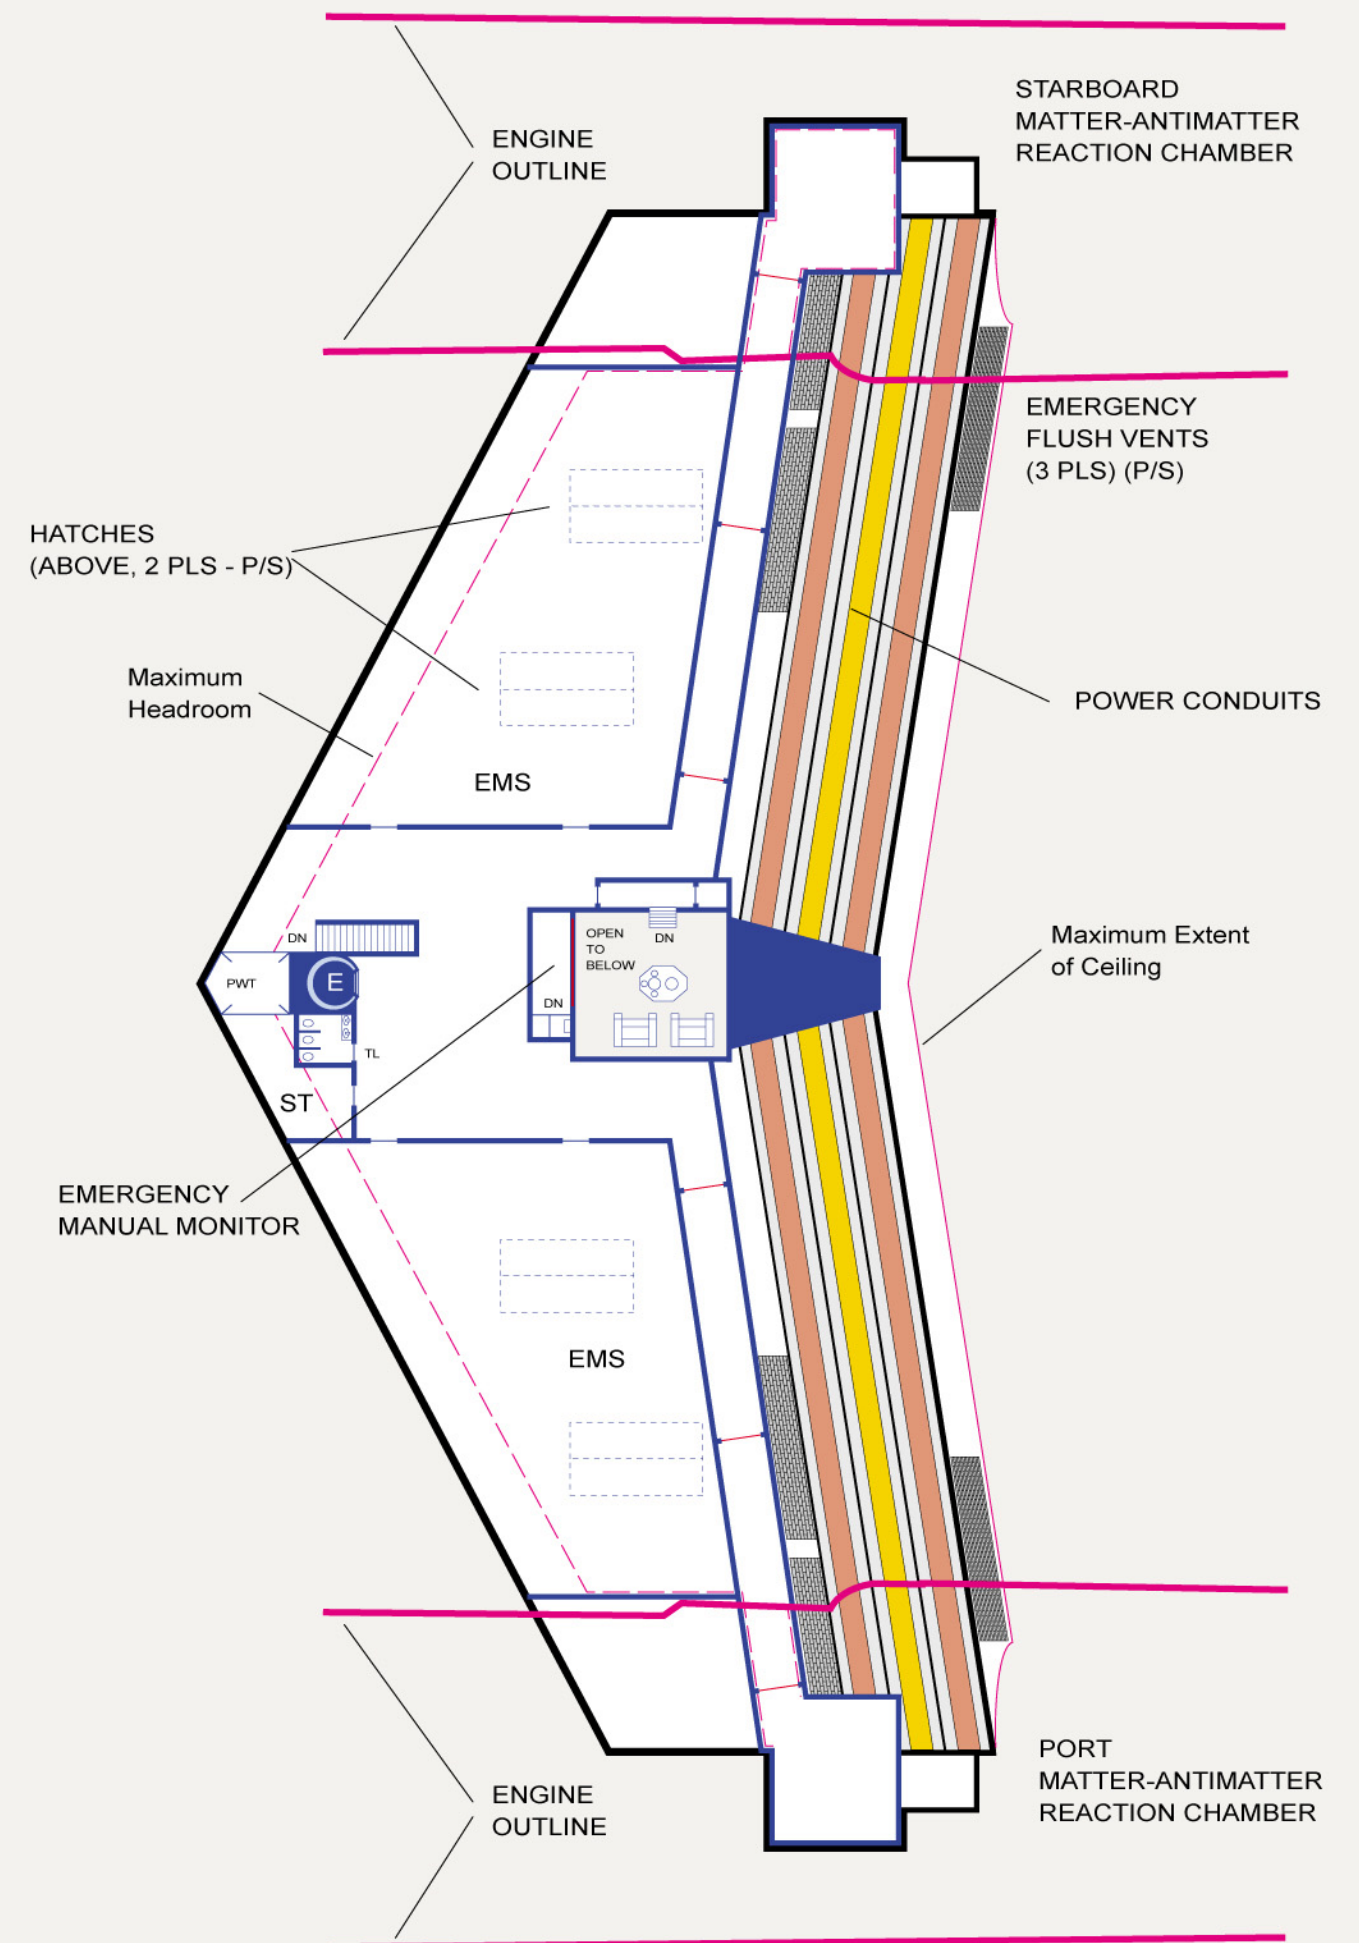

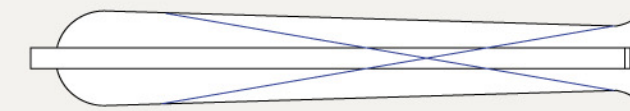

DECK 2

The science laboratories are physically partitioned, but the equipment and the data are all interconnected. The labs are surrounded by the fresh water tanks and pump machinery rooms. These water tanks continue down to Deck 3. There are more water tanks in the lower levels of the Primary Hull.

DECK 2 DORSAL

The Warp Engineering High Bay is centrally located in this very wide top level of the dorsal decks. Most of the space is occupied by the Emergency Flush vents, Power Conduits, and support equipment.

Engineering Machine Shops are on either side of Engineering. Oversized hatches allow for extra-vehicular activities.

DECK 2: DORSAL

DECK 2 DORSAL (continued)

The Matter-Antimatter Reaction Chambers are at the port and starboard ends of the deck. The Isolation Doors provide increased shielding along these corridors.
