

## NOTES

### DECK 3

The Bridge and the rooms around it reflect the philosophy of the Dreadnought design. They have all been retained, but are not used in the same capacity.

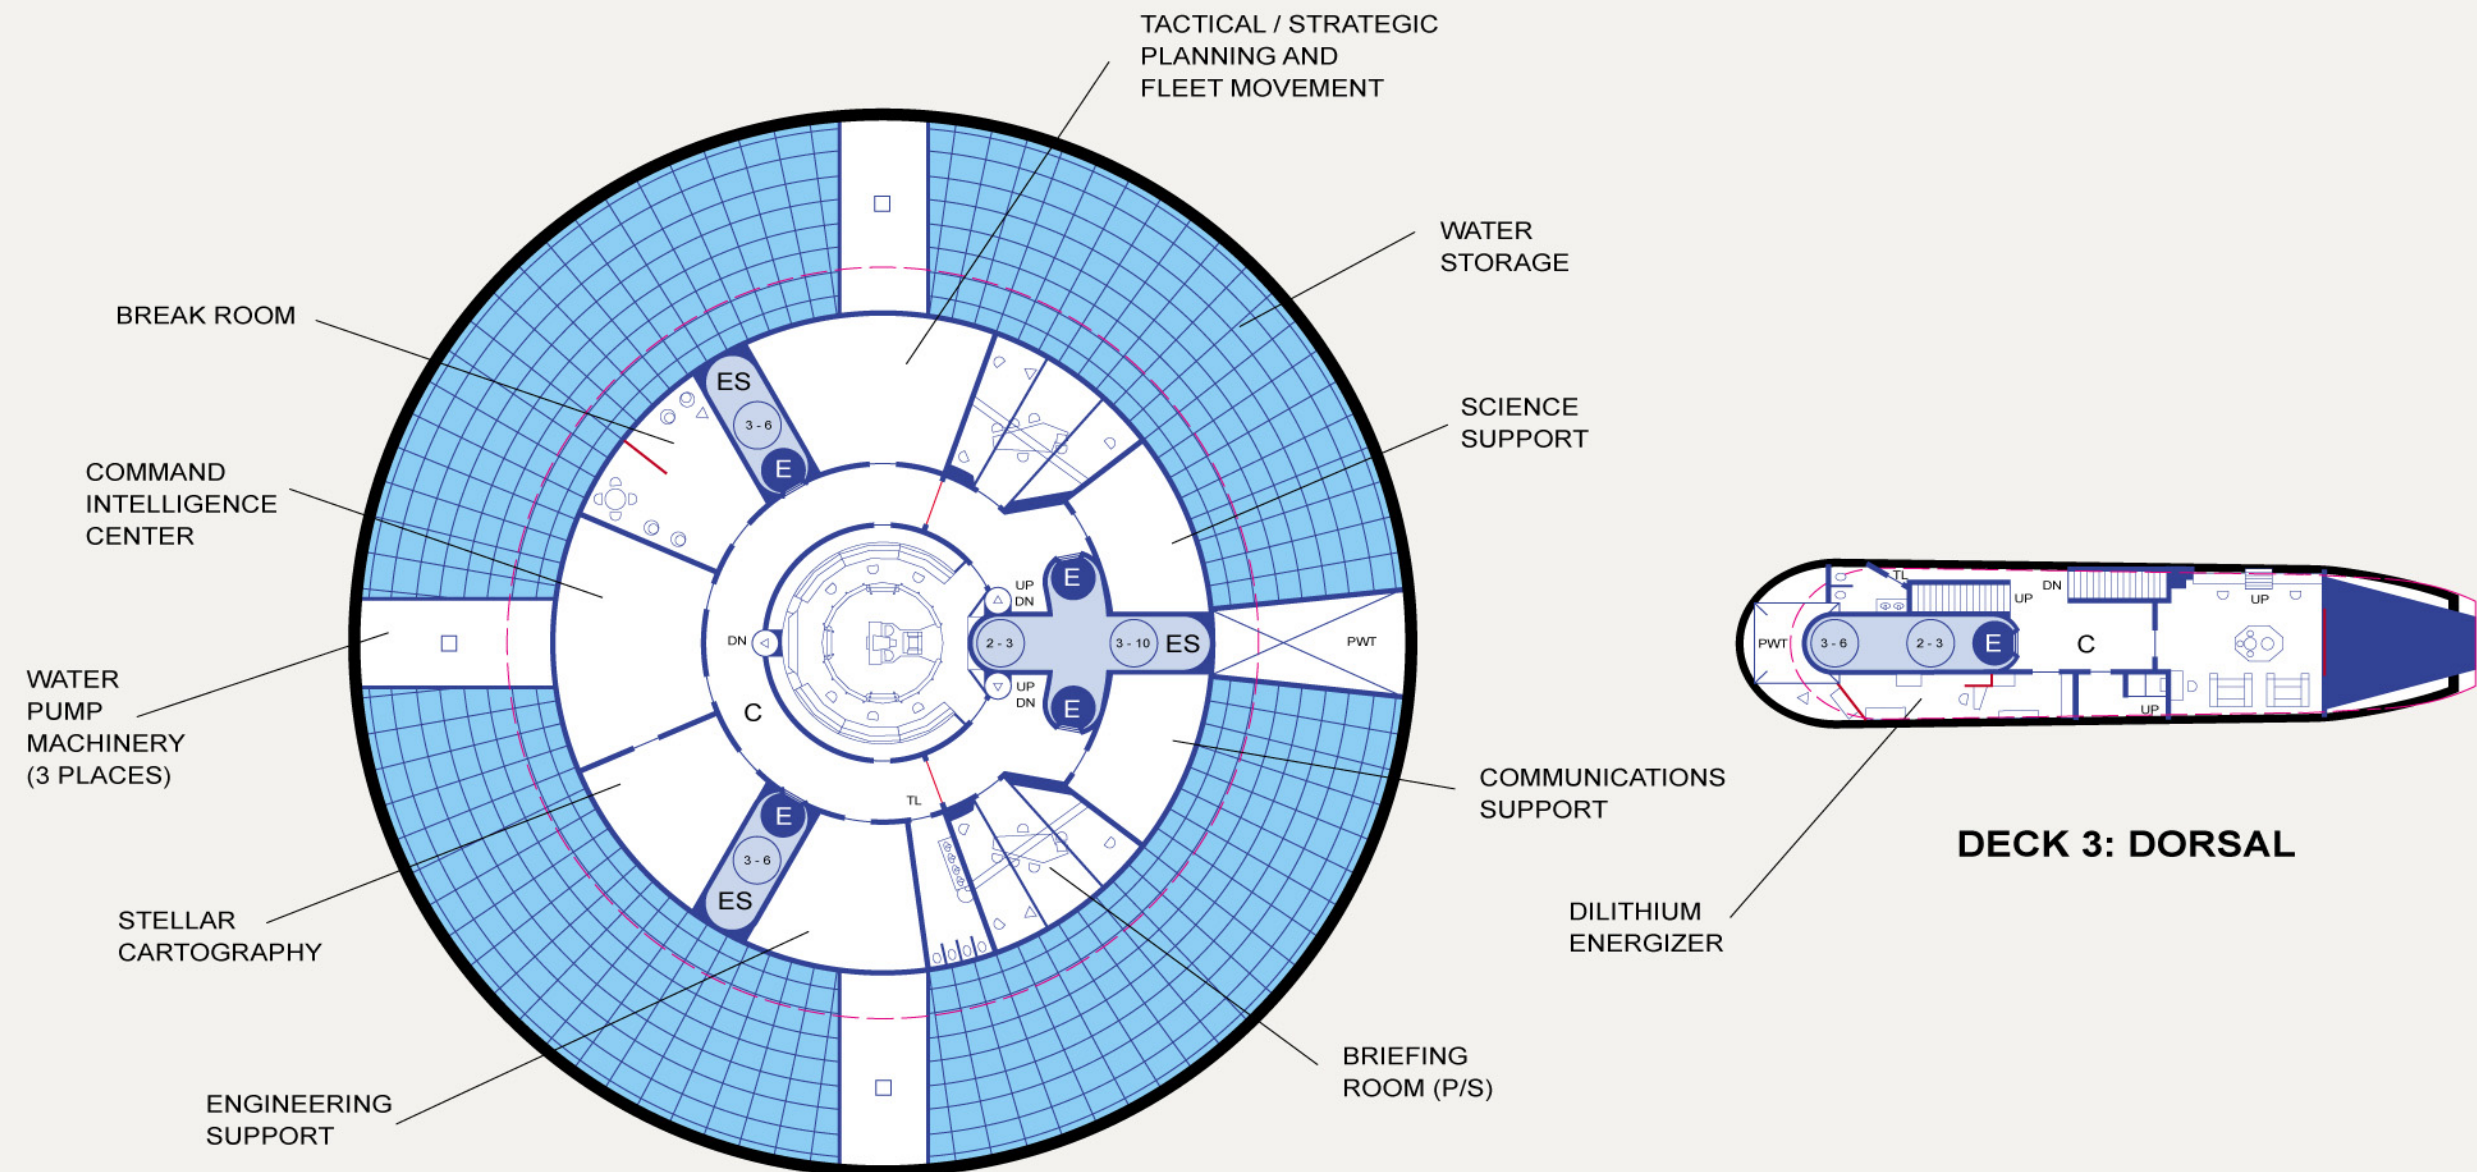

Around all these rooms are more fresh water tanks and water pump machinery rooms.

The three arms of the radial turbo-elevator system starts at this level. They don't cross-connect until Deck 6.

### DECK 3 DORSAL

The Dilithium Energizer Station is on the port side, ahead of the access ladder to the Emergency Manual Monitor.

Warp Engineering is at the rear.

DECK 3: BRIDGE / OPERATIONS CENTER
