

If printed 28 inches wide (from black-outlined edge to black-outlined edge) the scale of these drawings is 1/350.

NOTES

DECK 40
More Cargo Holds are located on this deck. The Cargo Lifts continue through this deck. The Flight Control and Tractor Beam Stations are also here; these are visible as long rectangular protrusions from the roof of the Hangar Bay. They can only be accessed from Deck 39.

The Hangar Bay occupies 4 decks, from Deck 40 to Deck 43.

DECK 41
More Cargo Holds are located in the center of this deck. A short stairway leads up to Observation Gallery. Guest Quarters are located around most of the perimeter.

DECK 42
More Cargo Holds are located in the center of this deck. Access to the second Observation Gallery is also here. Guest Quarters are located around most of the perimeter.

DECK 43
The Flight Deck has enough space for several small spacecraft. A Turntable / Lift provides access to the Maintenance Bay, if servicing is required.

Three doors lead from the Flight Deck to the interior of the Space Station.
The large central door is for pre-cleared visitors and dignitaries; it leads directly to a Turbo-elevator.
The door on the right also leads to a Turbo-elevator but it is for workers and residents on the Space Station.
The door on the left is for everyone else. It leads to a Waiting Room for the Processing (or Point-Of-Entry Center). From there, once cleared to enter the Space Station, a corridor leads visitors to a Turbo-elevator or to the Promenade.

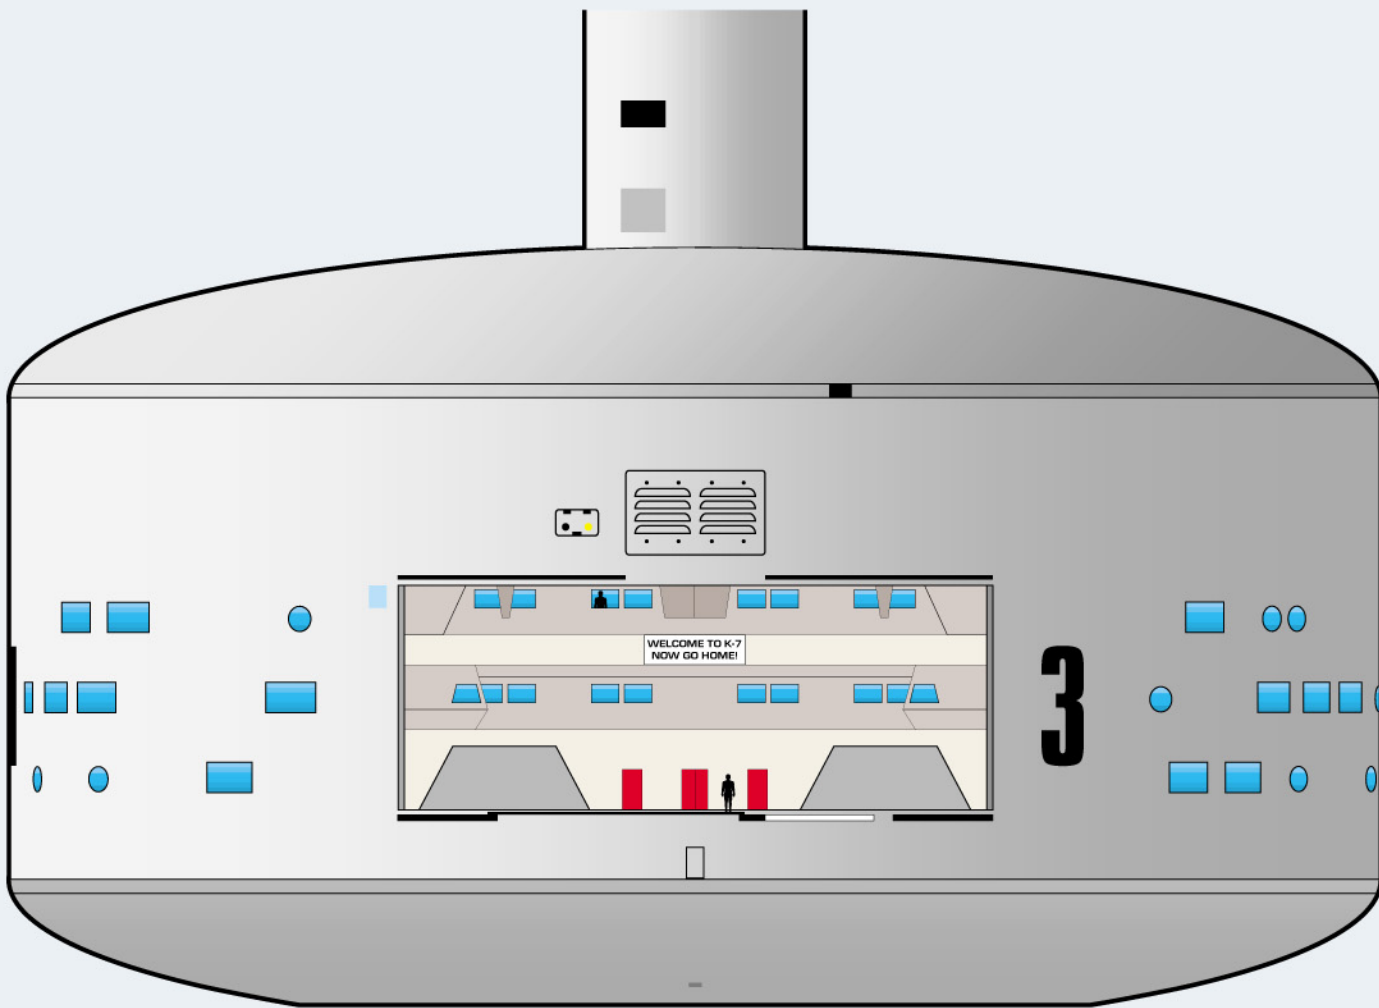

The Promenade is the "first exposure" to the Space Station for all visitors once they pass through the processing area. At one end is a Church and at the other end is the Brig. In the middle is a Trading Post / Bar.

The 3 Turbo-elevators do not reach any lower than this deck.

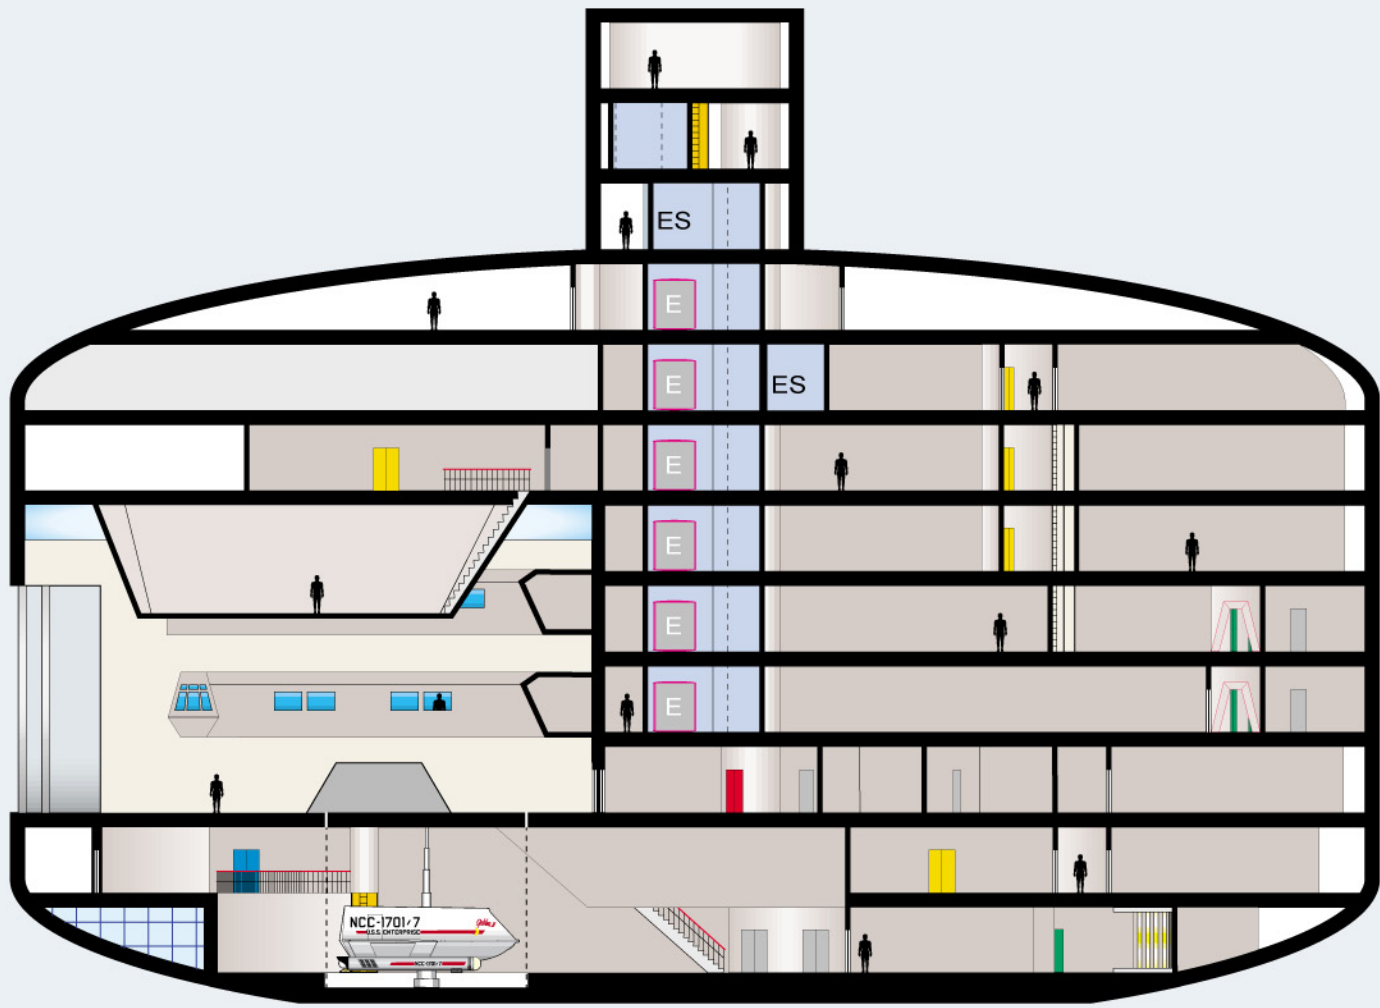

DECK 44
More Cargo Holds are located on this deck. The Cargo Lifts continue through this deck.

This deck provides a good connection - with ladders and wide stairs - to the Flight Deck (above) and the Maintenance Bay (below).

DECK 45
Cargo Holds around most of the perimeter are limited because of the curvature of the hull.
Fuel is stored at the front of the Maintenance Bay.
Cargo Lifts start on this deck and reach up to Deck 38.
A Cargo Transporter is located at the end of a corridor leading aft from the Maintenance Bay.
