

If printed 17 inches tall (from black-outlined edge to black-outlined edge) the scale of these drawings is 1/350.

NOTES

DECK 10
The Deflector Equipment located in the center of the deck work with the Deflector Equipment and the Space Energy Field Sensors located in the bow of Deck 6 and Deck 7 and with the Main Sensor Dish.

The Main Sensor Dish was only installed on the first few ships of this class. It was not installed on later versions because the Deflector System and Sensors in the bow of the Primary Hull were found to be adequate. On those later versions, the Deflector Equipment on Deck 10 was replaced with Cargo Holds.

TMoST mentions Photon Torpedoes but not their location. Photon Torpedoes were shown in various episodes of STAR TREK to emanate from the underside of the Primary Hull, approximately the same place as the Phasers. Since TMoST states Phaser Banks are on Deck 11, the logical spot for Photon Torpedoes and their launch system is on Deck 10.

TMoST states that miscellaneous activities and cargo spaces are on Deck 10. Since cargo spaces are on this deck, it is logical to place a Cargo Transporter here.

DECK 11
Phasers are located on this deck.

The equipment around the perimeter is for the Tractor Beam. The 3 Tractor Beam Controllers direct the Emitter so that the beam can locate and lock onto the object being towed.

The 3 pale gold-coloured recessed rings on the underside of the Primary Hull absorb and re-direct any back-scatter created by the Tractor Beam.

DECK 12
The Lower Sensor Dome is located here.
The Main Sensor Dish was mounted on the bottom of the Lower Sensor Dome only on the first few ships of this class. When the Main Sensor Dish was deleted, the Tractor Beam Emitter was installed at this location.

DECK 10: PHOTON TORPEDO LAUNCHERS / CARGO TRANSPORTER

DECK 11: PHASERS / TRACTOR BEAM

DECK 12: SENSORS / TRACTOR BEAM
