

If printed 17 inches tall (from black-outlined edge to black-outlined edge) the scale of these drawings is 1/350.

NOTES

DECK 9

Most of the front half of this deck is unchanged from the original configuration of the Constitution-class ship. Material Reclamation and Fabrication is probably not a 100% efficient process. Therefore, these 2 hatches could allow for transfer of rare elements required in various manufacturing processes.

Raw materials for the Fabrication Facilities and finished products from the Fabrication Facilities are kept in the Cargo Holds.

Air Conditioning ducts continue from the deck above.

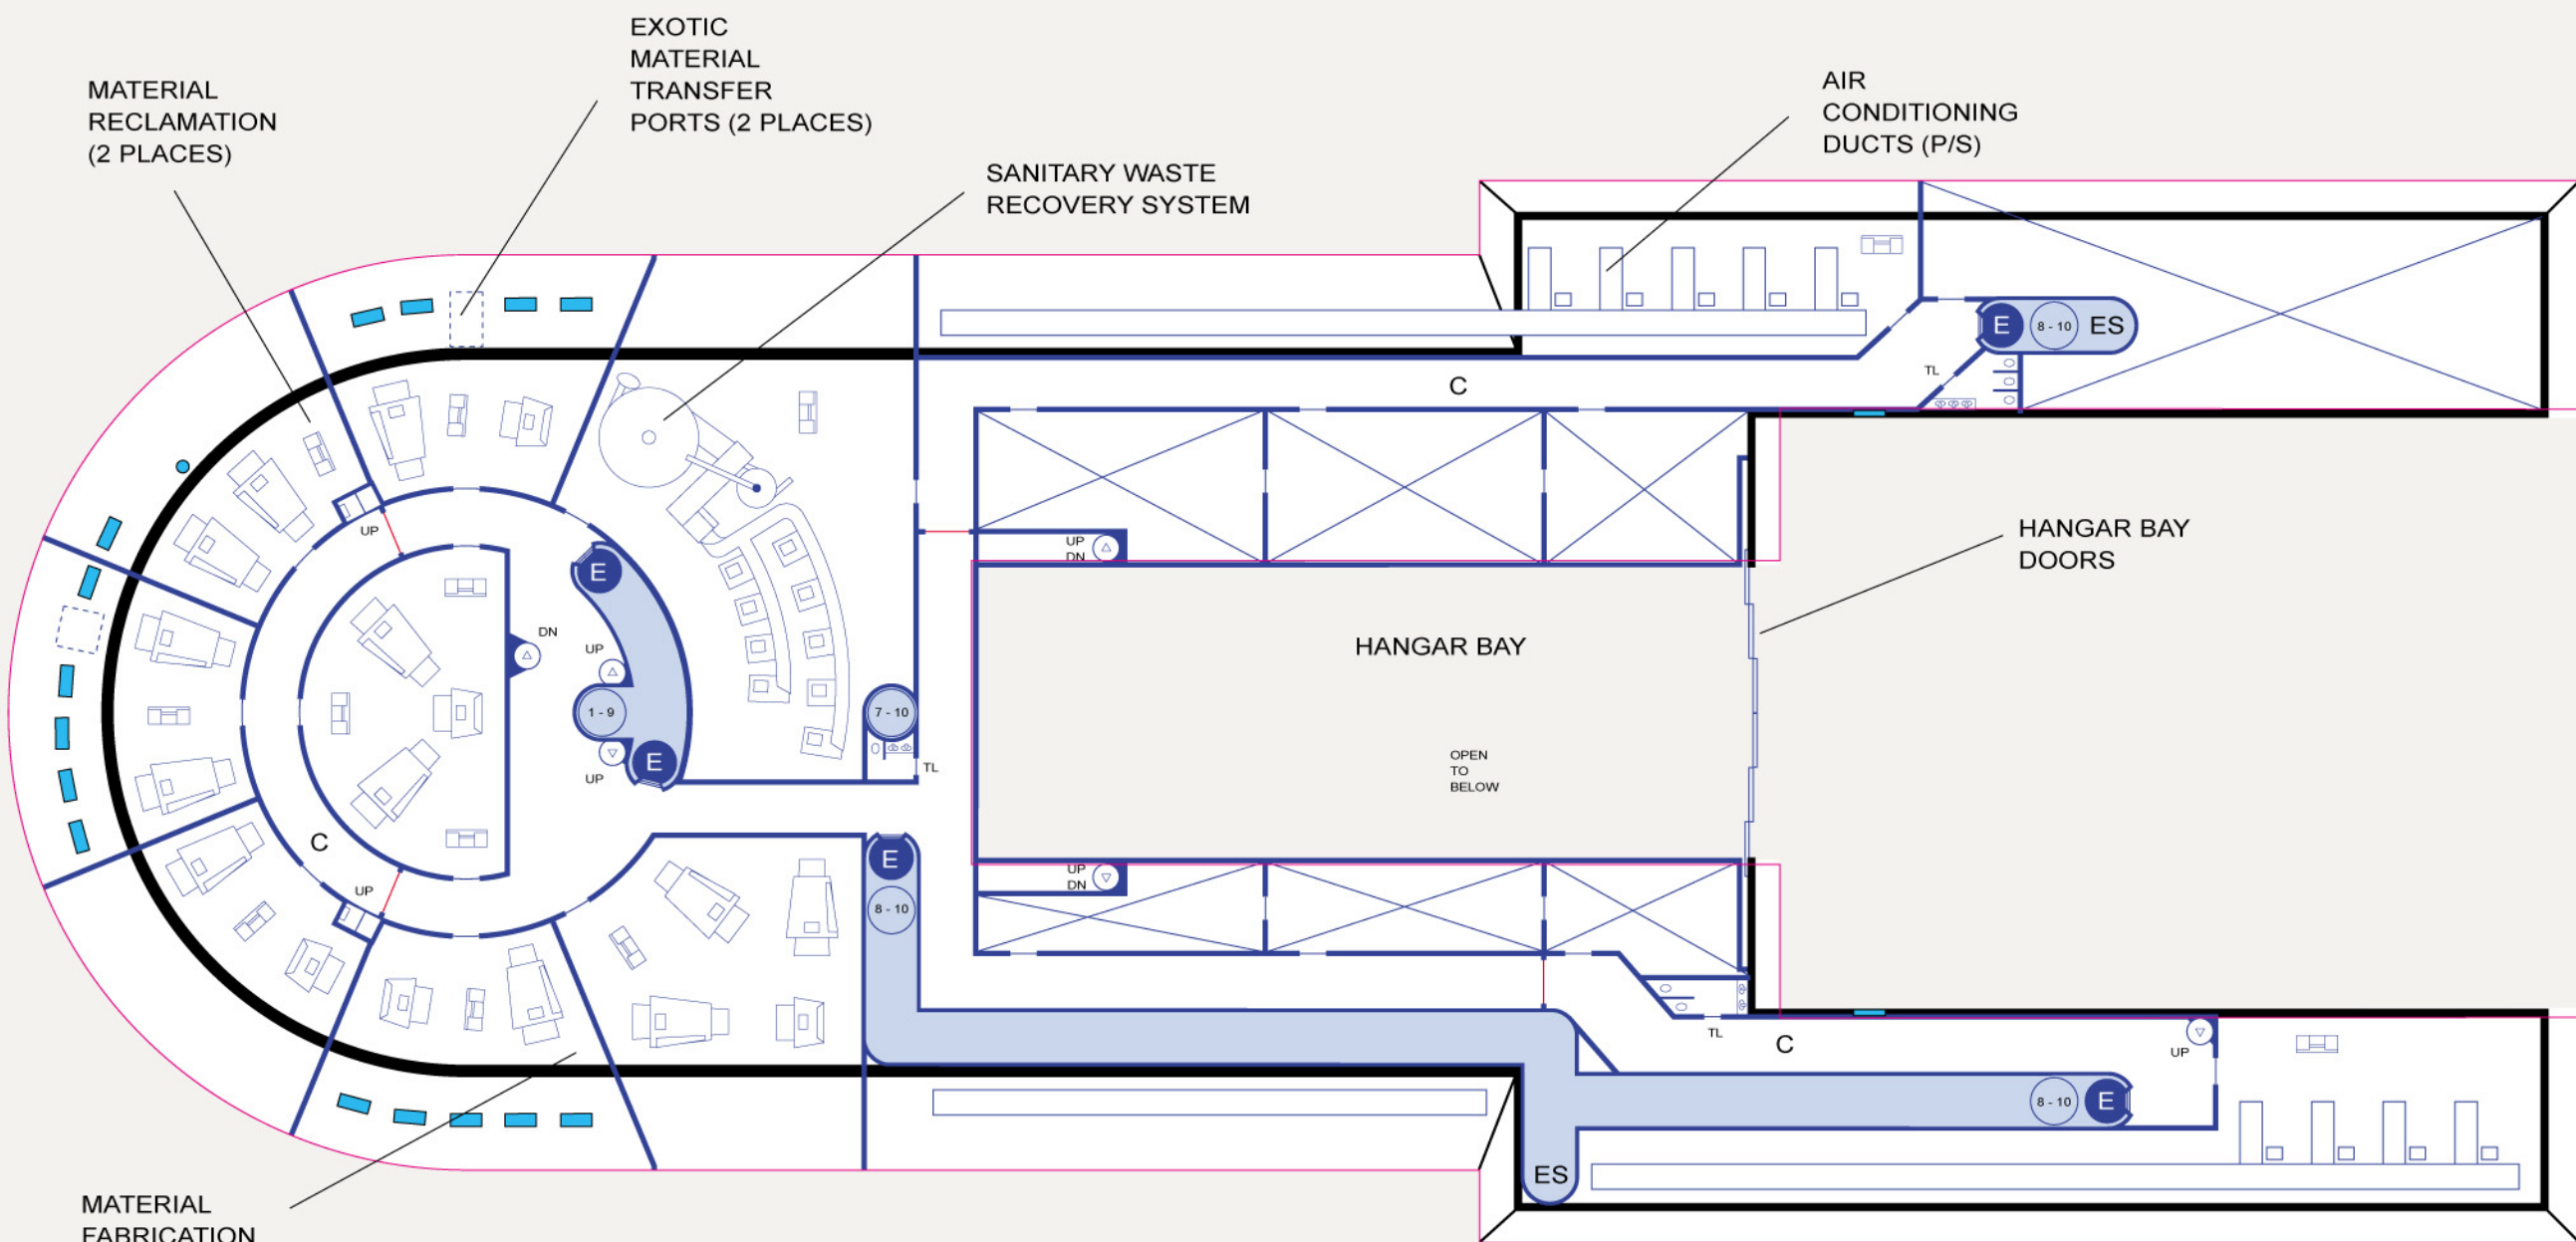

DECK 10

TMoST states that miscellaneous activities and cargo spaces are on Deck 10 of Constitution-class ships. Since cargo spaces are on this deck, it is logical to place a Cargo Transporter here.

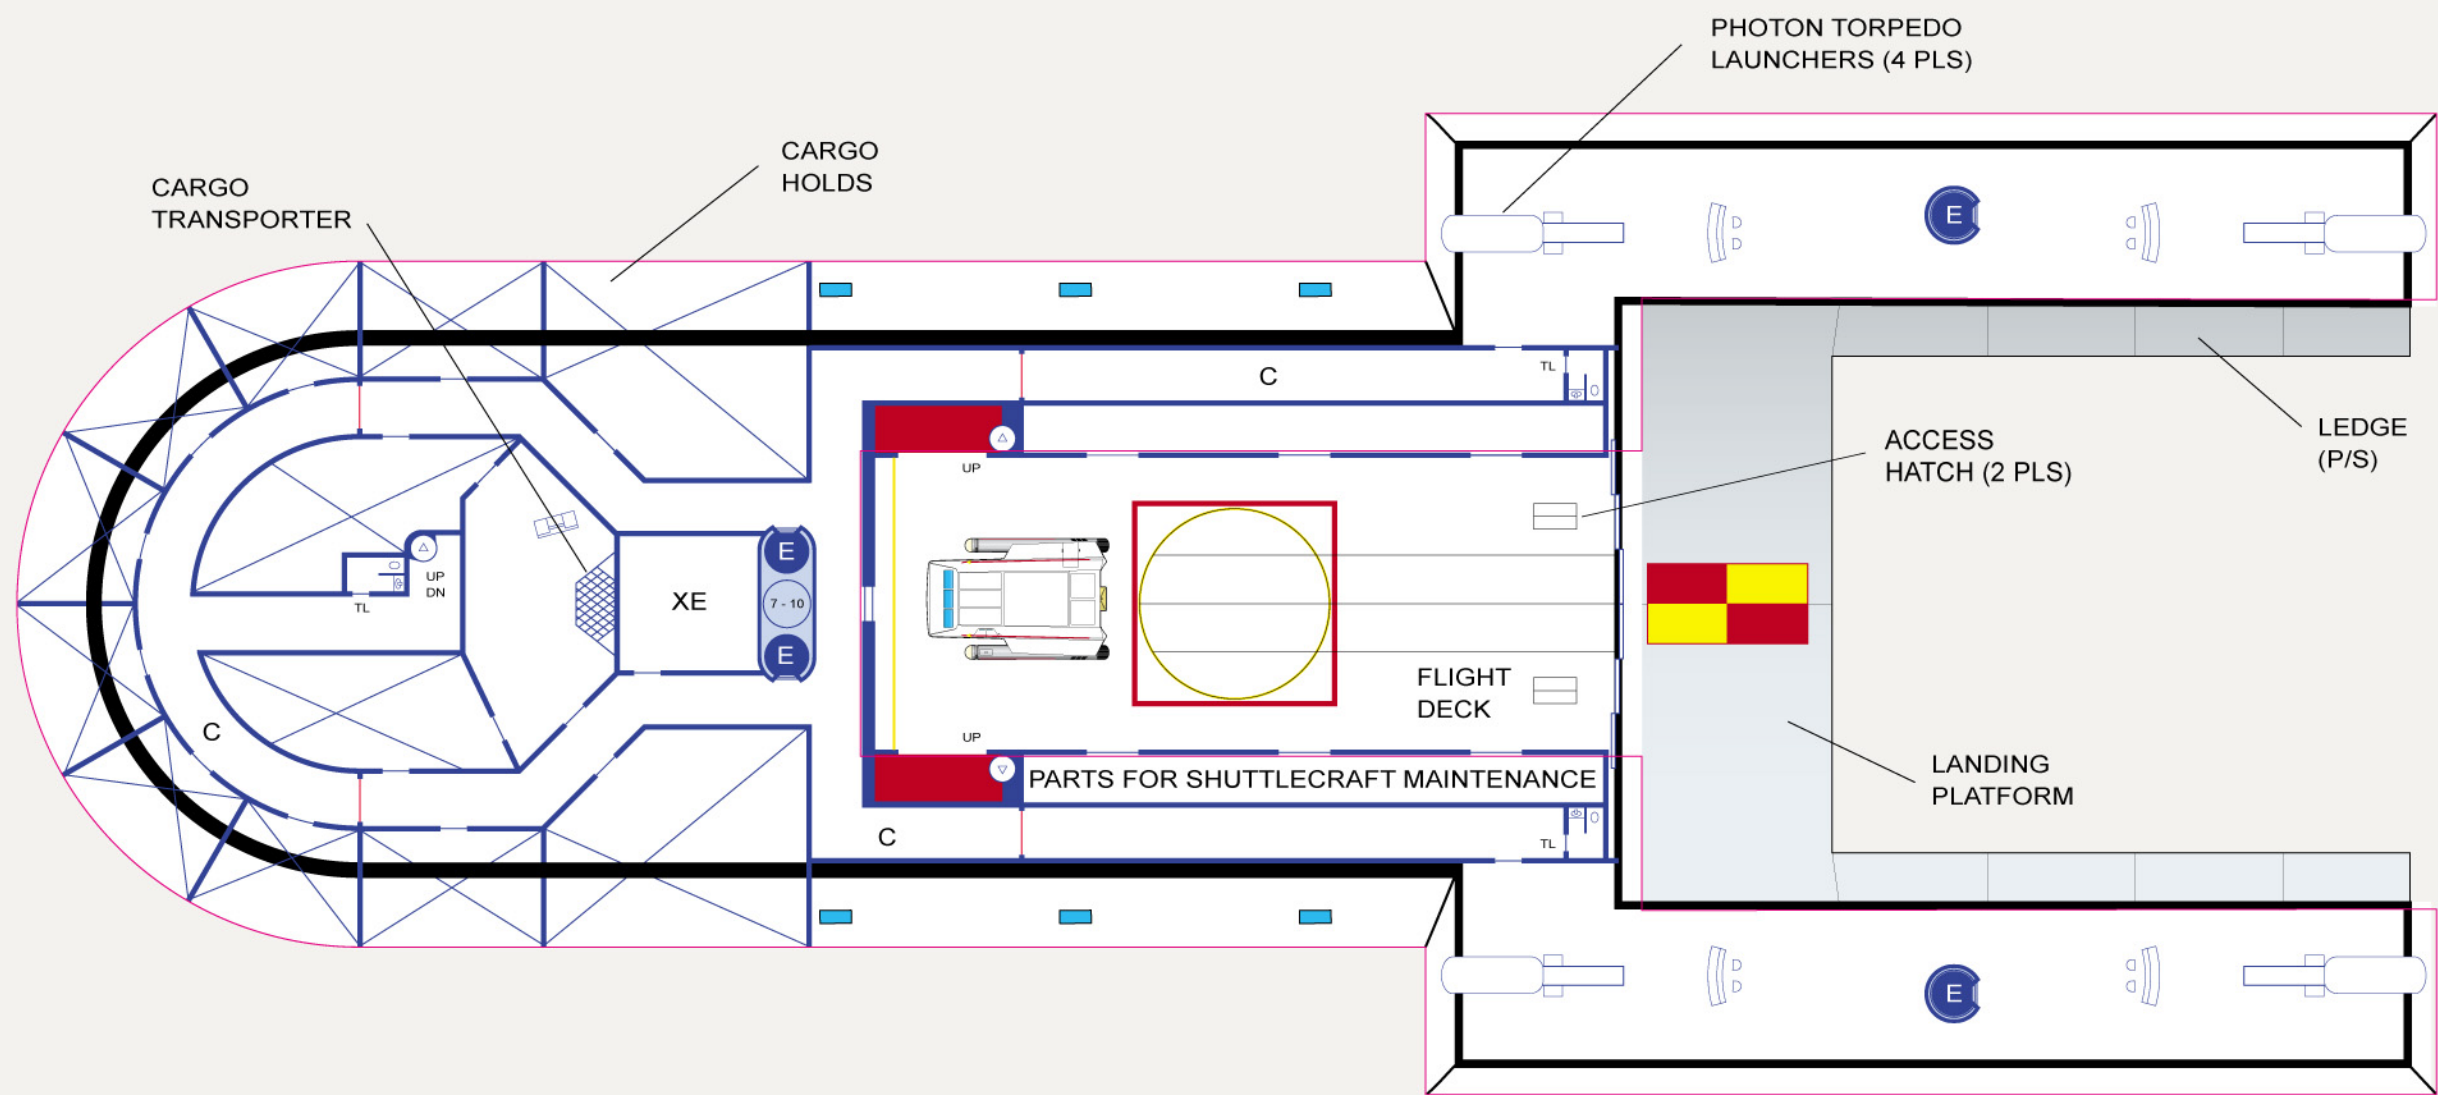

There are Photon Torpedo Launchers on many other ships at the front of this deck with Torpedo Storage on each side. Since the torpedoes launchers were moved to the pontoons, the configuration of the Cargo Holds has been modified and the Cargo Transporter Room has been enlarged / optimized for peak performance.

Shuttlecraft maintenance occurs on the Flight Deck. parts are stored on each side of the Hangar Bay. Fuel is stored on Deck 11.

There is no elevator platform for the shuttlecraft, only a turntable; the markings on the Landing Platform are for targeting / landing.

DECK 9: FABRICATION FACILITIES / HANGAR BAY

DECK 10: CARGO TRANSPORTER / FLIGHT DECK / PHOTON TORPEDO LAUNCHER
