

NOTES

DECK 12
Crew Quarters are on this deck.

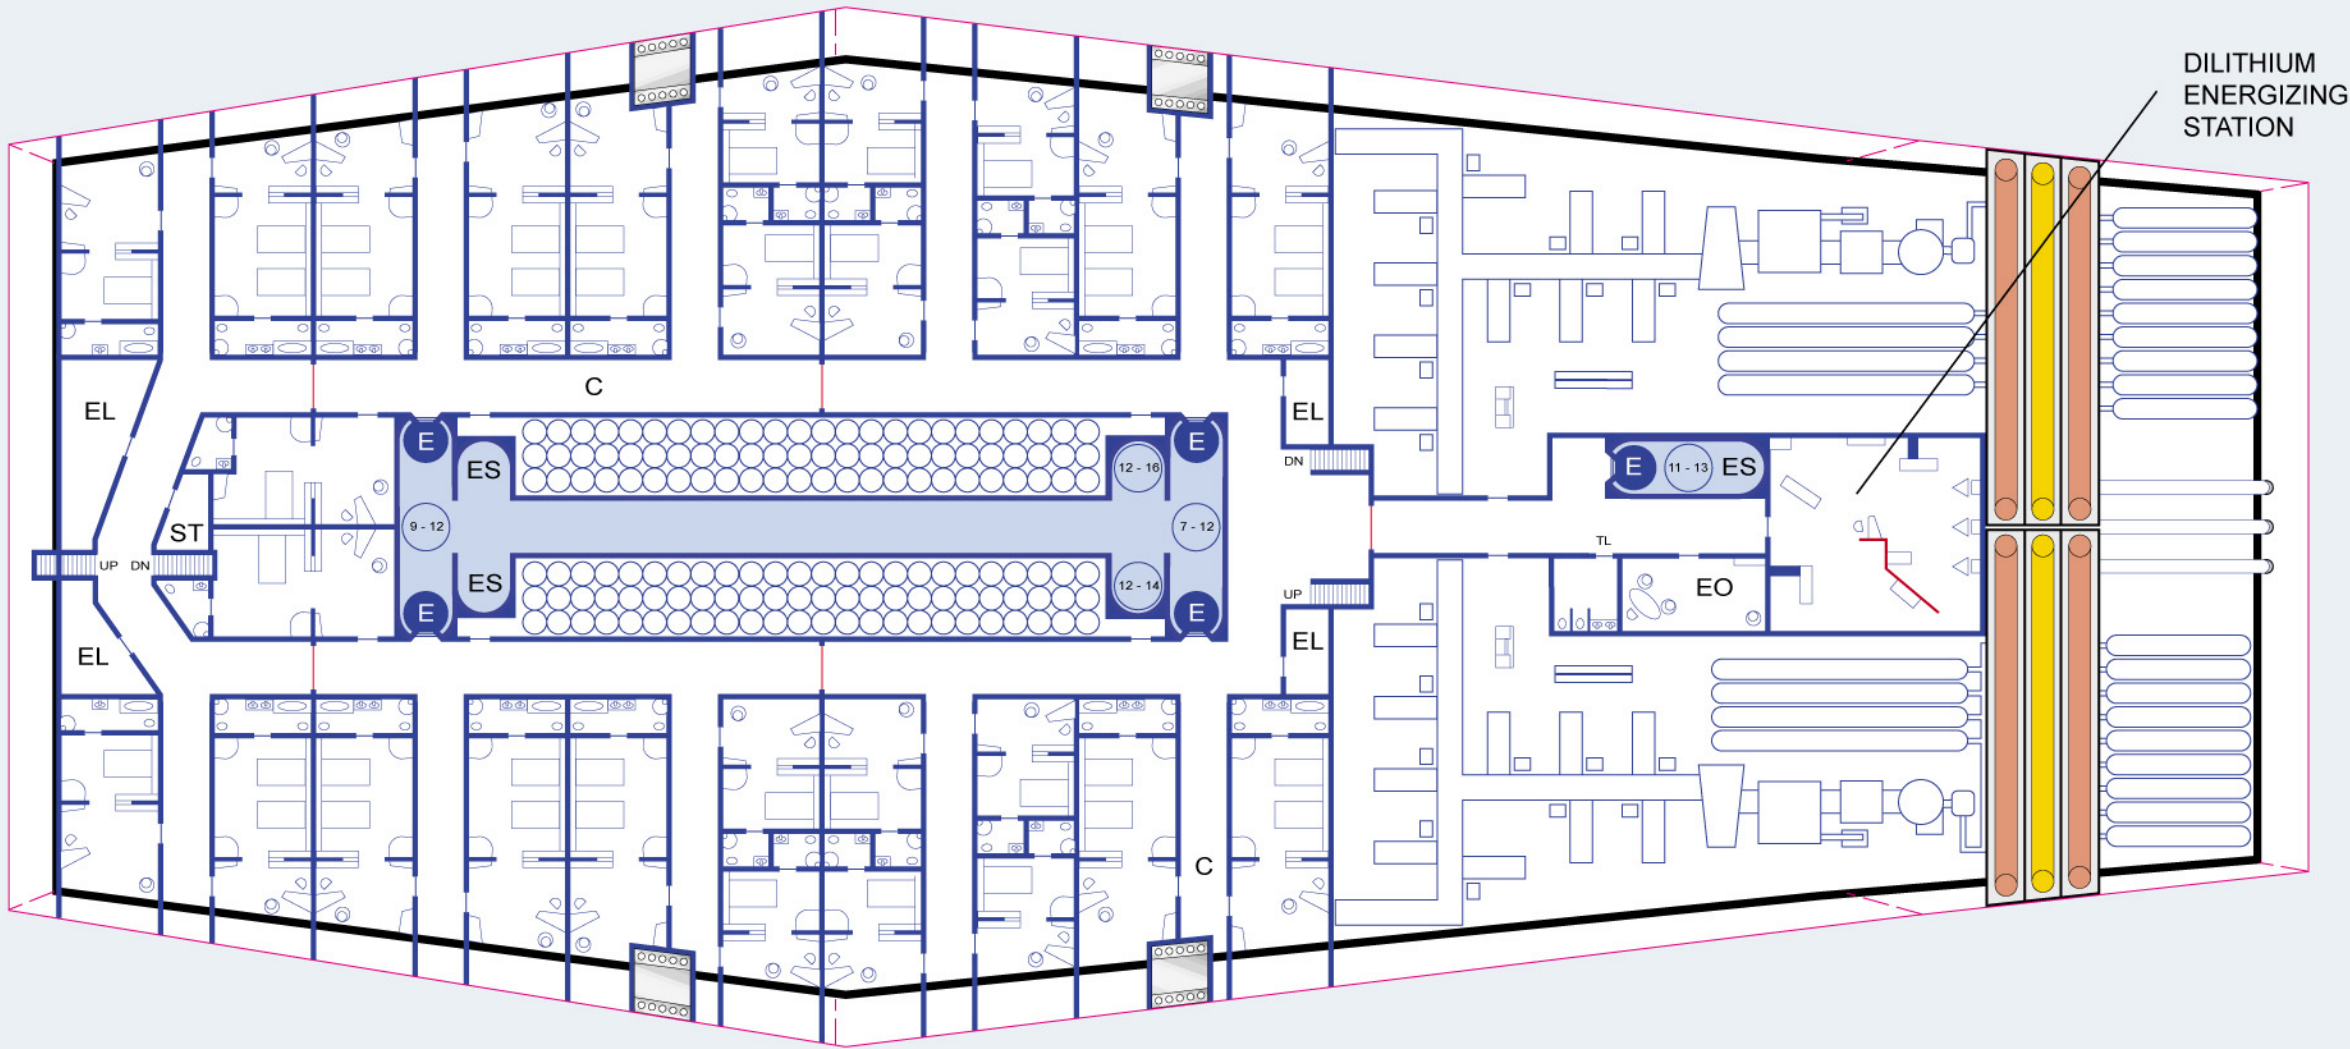

Batteries are in the center of this deck surrounded by Crew Quarters.

The rear half of the deck contains the main Air Conditioning Equipment and the main Gas Storage Tanks.
Between them is the Chief Engineer's office, and aft of that office is the Dilithium Energizer Station.

These early Dilithium Energizer Stations were not as efficient as later installations. They generate some excess ions. There are 3 vents for discharging these ions. In other words, the ship leaves a trail, and this trail can be tracked.

The Power Conduits from each Warp Engine run along the ceiling at the rear, and then turn upward into the Dilithium Housing located in Main Engineering on Deck 11, above.

All 3 Turbo-elevator systems serve this deck.
The front and center systems connect.

DECK 12: CREW QUARTERS / AIR CONDITIONING
