

NOTES

DECK 10 DORSAL
Engineering Monitoring Stations are located here.

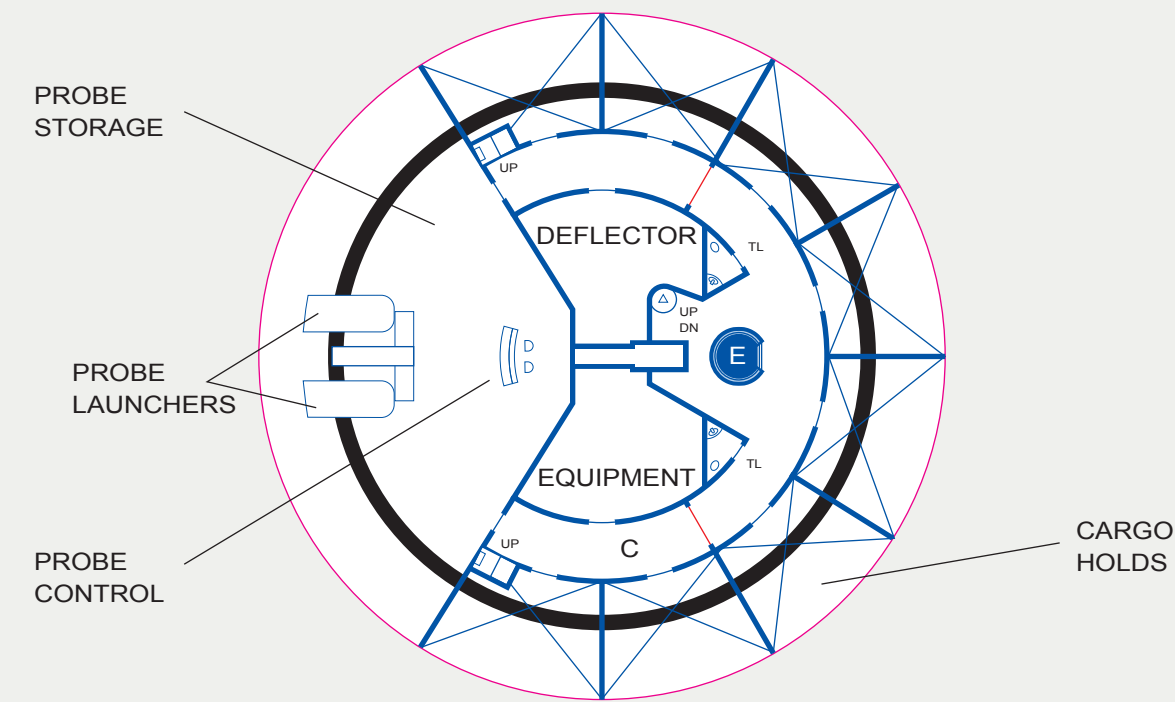

DECK 10 (common to both)
The Deflector Equipment located in the center of the deck work with the Deflector Equipment and the Space Energy Field Sensors located in the bow of Deck 6 and Deck 7 and with the Main Sensor Dish. It surrounds the hollow pocket used for stowing the support strut of the Main Sensor Dish when it is retracted.

Photon Torpedoes were shown in various episodes of STAR TREK to emanate from the underside of the Primary Hull, approximately the same place as the Phasers. On Constitution-class ships, Phaser Banks are on Deck 11, so the Photon Torpedo launch system is on Deck 10.

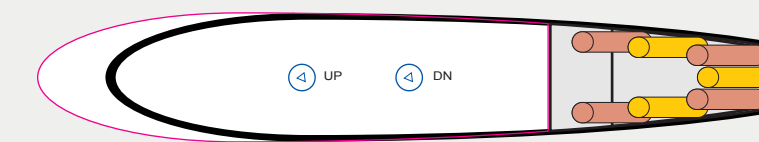

DECK 10 SCOUT
Scouts do not carry Photon Torpedoes, but they do carry Probes. Both employ the same launch system and tracking / control system. Therefore, Probe Launch Control and Probe Storage are located on Deck 10. The rest of the deck is filled with Cargo Holds.

DECK 10 DESTROYER
Destroyers do have Photon Torpedoes as well as Probes. Therefore, Torpedo / Probe Launch Control and Torpedo / Probe Storage are located on Deck 10. The rest of the deck is filled with Cargo Holds.

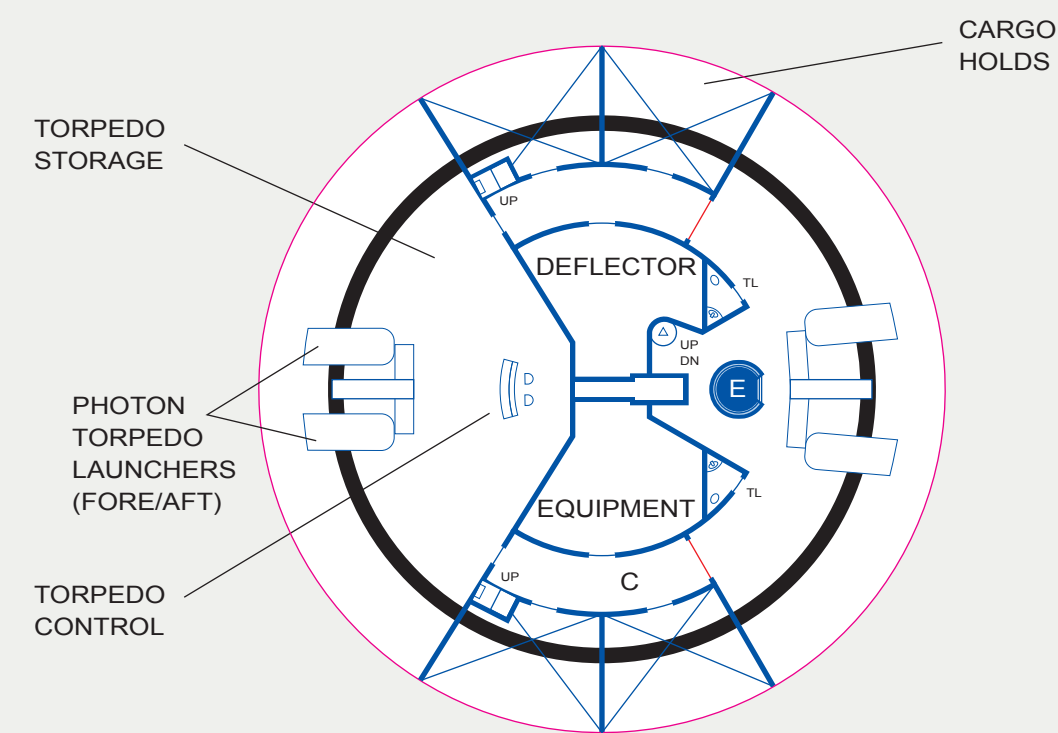

Rearward-firing Torpedo Launchers have also been installed by removing some of the Cargo Holds. The rest of the deck is filled with Cargo Holds.

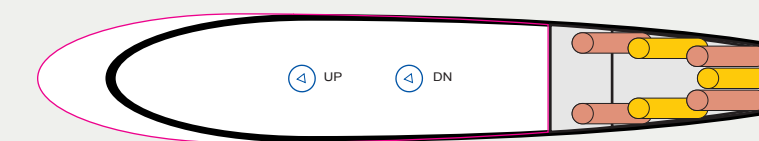

DECK 10: PROBE LAUNCHERS / CARGO
